

TITAN

Cost-Effective Solvent Recycler

The Titan Fluid Recycler is a portable reclaiming unit designed to extend the life of fuels, oils and solvents. The Titan Fluid Recycler uses high quality filtration to remove water and particulate contamination from hydraulic oils, diesel fuels and solvents. The electric/diaphragm pump assembly flows at 180gph or 360gph and micro-fiberglass media achieves required fluid cleanliness levels.

Easy on/off functionality and 110v power source makes set-up and operation effortless. Operator can monitor filter status via onboard filter gauge. No other portable filtration system is as effective.

TITAN
FLUID RECYCLING
TECHNOLOGY

TITAN

Benefits:

- Extends life of fuels, oils and solvents
- 90% reduction in disposal costs
- Reduce new fluid purchases

Features:

- 0.5 micron filtration
- Absorption media to remove water (option)
- No tools operation
- Differential pressure gauge to monitor filter life
- Easy filter changes and very low maintenance requirements
- 6 gpm pumping system

Applications:

- Part washer/degreaser solvent maintenance
- Hydraulic oil reservoir and pumping systems
- Marine diesel fuel tanks
