

# Premium Quality Recycling Parts Washer

Clean parts and weapons faster and easier—even as you save money and reduce waste.

## PCS-25 Parts Cleaning Station

Optional equipment shown:  
Air Gun, Agitation Tank,  
Pre-Clean Shelf.

## PCS-25

### “The Younger Brother”

*PCS-15 Parts Cleaning Station*

The PCS-15 shares the same build quality and features in a smaller, more economical size. This is a vastly superior replacement to the 30 gallon “sink on a drum” found in so many shops.

## Clarus Technologies' PCS-25: Premium Quality, Reduce Solvent Cost, Eliminate Solvent Disposal, Lower Operating Cost, Environmentally Friendly

The best commercial part washer isn't necessarily the costliest to operate and maintain. Only Clarus Technologies Parts Washer (PCS-25) offer ultimate quality, create minimal waste and save the most in daily operating costs.

**Eliminate Waste!** Solvent never goes bad, it only gets dirty. The PCS-25's intelligent design eliminates solvent waste. It is built as a closed system so the PCS-25 cleans the solvent while you work. Furthermore, the one-of-a-kind cone-shaped tank and patent pending "Tortuous Path" baffle system settles the large particulates before going to a 0.5 micron filtration system to ensure a consistent and constant clean solvent. Never change or waste solvent again!

**No Service Contracts!** Most parts washers require waste disposal contracts and unnecessary service contracts with hidden fees. However, Clarus Technologies PCS-25 eliminates those pesky surprises. The PCS-25 is so easy to use that anyone can maintain it in a few minutes. Furthermore, Clarus Technologies, LLC provides easy to learn instructional videos on-line or on your mobile phone with QR codes.

**Save Money!** The PCS-25 is built to last decades with its robust stainless steel parts and intelligent design. Save thousands by eliminating solvent waste, waste disposal contracts, maintenance contracts and associated labor costs. The long-term benefits will outlast all competing parts washers.

Go ahead and compare, you'll find Clarus Technologies PCS-25 lets you clean parts faster and easier— even as you reduce waste and save money.

### Regulated Shop Operated Air Gun Tool (optional):

This regulated tool is a convenient method to remove solvent from difficult to access areas. Using the shop air or the optional onboard compressor, this air gun attaches through a built-in regulator connected to a flexible hose and ergonomic hand held air gun.

### Agitator Pump and Soak Tank (optional):

The Underwriters Laboratory (UL)-approved submersible pump agitates the solvent in the stainless steel soak tank to clean small parts.

### Pre-Clean Shelf (optional):

A high strength stainless steel work surface acts as an extension of the part washer for resting heavy parts and for cleaning parts prior to cleaning them with solvent. Proper pre-cleaning of parts has a direct beneficial impact on the service life of the solvent.

### 0.5 Micron Filters with Zero Overflow Design:

Long life, high quality 0.5 micron filters fit into easy-open canister to keep your solvent clean. Replace the solvent filters within the tank to keep any mess inside. Simply open the filter covers by hand and insert new filters.

### Patented Baffle System:

The patented "Tortuous Path" baffle system uses gravity and a slow moving fluid path to let contaminants and sludge settle out of the solvent. This system allows the pump to pull the cleanest solvent from the top of the tank and filter it to deliver consistently clean solvent. Stainless steel tank assemblies are also available for use with aqueous based cleaners (optional).

### Halogen Light :

250-watt halogen light provides a well lit work space.

### Diaphragm Pump:

The do-it-yourself pump system allows for the removal of sludge without spilling a single drop. This pump can also be used to pump the solvent out of the PCS-25.

### WCS-25 - Weapons Cleaning Station (optional):

Two soldiers can work side-by-side to clean and strip their weapons. This configuration includes a stainless soaking tray for weapon barrels and two ergonomically shaped solvent brushes.
